Create a machine learning workspace

Basics Networking Encryption Identity Tags Review + create

### Resource details

Every workspace must be assigned to an Azure subscription, which is where billing happens. You use resource groups like folders to organize and manage resources, including the workspace you're about to create. [Learn more about Azure resource groups](#)

### Work with your models in Azure Machine Learning Studio

The Azure Machine Learning Studio is a web app where you can build, train, test, and deploy ML models. Launch it now to start exploring, or [learn more about the Azure Machine Learning studio](#)

Meta developed and released the Meta Llama 3 family of large language models (LLMs), a collection of pretrained and instruction tuned generative text models in 8 and 70B sizes. The Llama 3 instruction tuned models are optimized for dialogue use cases and outperform many of the available open source chat models on common industry benchmarks. Further, in developing these models, we took great care to optimize helpfulness and safety.

**Model developers** Meta

**Variations** Llama 3 comes in two sizes — 8B and 70B parameters — in pre-trained

Provision an inference API within seconds through Models as a Service. Explore the model in the playground. Pay only for tokens consumed.

paygo-inference-output-tokens:	paygo-inference-input-tokens:
\$0.01134 per 1000 tokens	\$0.00378 per 1000 tokens

Deployment options

Serverless API with Azure AI Content Safety PREVIEW

This option offers managed API service that does not require you to host or manage infrastructure. You can choose to include standard Azure AI Content Safety filters with this option.

Managed Compute without Azure AI Content Safety

This option offers user-managed hosting and model inferencing on Azure infrastructure. It doesn't use Azure AI Content Safety filters and you may be at higher risk of exposing users to harmful content.
